IN THE CITY OF PORTLAND OREGON

THE COST OF GUN VIOLENCE

When someone is shot in Portland, there is an immediate, multifaceted, and very expensive response from an array of government agencies. The Fire Department dispatches EMTs, government contracted ambulances respond, several police units descend on the scene, investigators from the District Attorney’s office often arrive, City contracted community outreach workers show up, and if the victims are declared dead on the scene, the medical examiner is called. And all of this is only the shooting scene itself. Then there is a hospitalization often paid for by tax dollars and in the case of serious injury, a rehabilitation. Victim compensation is often provided. There is protracted investigation by the Portland Police Bureau (PPB) and the Multnomah County District Attorney. They are sometimes joined by the federal US Attorney.

With PPB’s clearance rate at 81 percent in 2017, most often there is a trial and a long incarceration period. When there are multiple victims and/or multiple suspects, these efforts multiply for a single shooting incident.

These are just some of costs of each injury shooting in Portland. The National Institute for Criminal Justice Reform (NICJR) was commissioned by the City of Portland to conduct a detailed analysis and publish this Cost of Gun Violence study that documents the government expenses that accompany every injury shooting in the City. NICJR tracked the direct costs of each shooting and has deliberately used the low end of the range for each expense. Additionally, not included in this study are the loss of production costs when the victim(s) or suspect(s) were working at the time of the shooting.

PORTLAND

CRIME STATISTICS

From 2016 to 2018, Portland has had a 63% increase in homicides and 25% increase in injury shootings. The increase of violence not only results in the loss of lives, but also strains the public services such as law enforcement, emergency rooms, courts, and social services.

Each shooting homicide in Portland costs taxpayers $1.5 million

In the past five years, Portland has had an approximate average of 100 injury shootings and homicides which result in an annual expense to taxpayers of more than $100 million. If Portland could reduce its gun violence rate by just 20%, that could result in a combined government savings of $30 million every year.

If Portland could reduce its gun violence rate by just 20%, that could result in a combined government savings of $30 million every year.

Shooting response and investigation is very time consuming. If police officers were freed up to focus on more service to the community, response times on all calls for service could improve, improved engagement with the community could be achieved, and overall crime could be reduced.

The City of Portland, Multnomah County, and the State of Oregon should consider greater upfront investment in gun violence reduction. Relatively small investment in effective gun violence intervention strategies can yield significant reductions in shootings, save lives and produce massive savings.

PORTLAND

COST PER SHOOTING BREAKDOWN

1. CRIME SCENE RESPONSE

The response to a severe injury shooting or homicide scene usually includes a heavy police presence, Fire/EMT response, along with medical transport. According to officials with the Portland Police Bureau, up to 28 officers including patrol, the Gun Violence Reduction Team, Homicide Unit, Forensics, and the DA’s Office respond to a typical homicide shooting.

2. HOSPITAL & REHAB

Once a victim has been transported to the hospital, the cost of the Trauma Unit, surgery and rehabilitation are exorbitant. Costs can range from $88k to $144k per incident. With more than two-thirds of gunshot victims either uninsured or on Medical, this puts a tremendous strain on the county’s hospital network.

3. CRIMINAL JUSTICE

Police investigation; a trial or court process that includes prosecution and defense costs; and court staff make up the many costs of the court process in injury shooting and homicide cases. And due to the heavy penalty of homicide convictions, these cases often go to trial. Sometimes these cases involve multiple suspects with multiple court dates and separate trials. From the time of arrest, the court proceedings in an injury shooting and homicide case can take two years.

4. INCARCERATION

Incarceration accounts for a large portion of the costs once a suspect is arrested. The Multnomah County Jails cost on average $267 per day. Suspects can remain in the county system for two years until their trial, sentencing, and placement into the State prison system. The Oregon State prison system cost $116 per day and can range from $338k to over $973k to incarcerate individuals convicted of attempted murder or homicide.

5. VICTIM SUPPORT

The majority of these costs are covered by Oregon’s Crime Victim and Survivor Services program. Costs can range from $51k to $57k and include burial expenses, lost wages for a year, medical expenses, and counseling. Other costs in this category include county Social Services, the cost of families losing a financial contributor and the cost of the autopsy.

6. LOST TAX REVENUE

Even though Portland doesn’t have local sales tax, there is an average State income tax of 7.90%. When an injury shooting or homicide occurs, the State loses the ability to collect income tax from the incarcerated suspects and homicide victims. Each incident can represent the lost tax revenue of two to three individuals, from 10 to 25 years.

OREGON’S COST OF VIOLENCE EACH YEAR

$891 MILLION

“Based on the expenses we can directly measure, including healthcare costs ($36 million), law enforcement and criminal justice expenses ($30 million), costs to employers ($5 million), and lost income ($820 million), the initial price tag of gun violence in Oregon is over $891 million per year. Much of this tab is picked up by the public.”

THE ECONOMIC COST OF GUN VIOLENCE IN OREGON, The Giffords Law Center
In addition to the direct financial costs that taxpayers bear the burden of, community members in neighborhoods where rates of violence are highest, suffer from social impacts of trauma, toxic-stress, and community tension.

Children are especially affected by the impact of violence around them. Groundbreaking research known as the ACEs study – Adverse Childhood Experiences – revealed that children who have traumatic experiences when they are young have significantly higher rates of poor health outcomes as they grow older. Experiencing violence, witnessing violence, having close friends or family members victimized by violence produces trauma and vicarious or second-hand trauma. Studies have proven that the brain function of young people who experience trauma can be negatively affected and cause depression, behavioral challenges, academic disruption, and delinquency.

Increased levels of violence and the trauma it produces also leads to community members being desensitized. The normalization or even expectation of violence can lead to high rates of gun possession, tension, and the resolving of minor disputes with gun violence.

The public health approach to violence also proves that like disease, violence is a contagion and can breed in areas of social dysfunction. This is where we get the axioms hurt people, hurt people and that violence begets violence. They are not just clever clichés but based in science. The National Institutes of Health, in its paper, “The Contagious Spread of Violence Among US Adolescents Through Social Networks” found that, “Contagious diseases and violence tend to cluster in similar ways. A cluster is an ‘aggregation of cases of a disease that are closely grouped in time and place.’ There are geographic “hot spots” for contagious diseases, such as the 2015 measles outbreak linked to Disneyland in California involving clusters of unvaccinated children. Likewise, there are geographic hot spots for violent crime on specific streets and in specific neighborhoods.” (Bond and Bushman, 2017).

The direct financial burden of gun violence documented in this report also does not include the loss of resources in communities with high violence rates. Businesses, recreational centers, community events and festivals, access to fresh produce, and other resources usually flee from neighborhoods with high rate of violence.

A recent study conducted by the Controller for the City of Philadelphia examined the impact of gun violence on property values and corresponding tax assessments. “Our results indicate that a single homicide lowers sale prices by 2.3 percent in the immediate neighborhood (within 0.75 miles of the homicide),” states the “Report on the Economic Impact of Homicides” (Rhynhart, 2019).
